

ASTM INTERNATIONAL
Cannabis Standards and Services

ASTM International CANNQ/HEMPQ Certification Program

We help all cannabis and hemp producers meet and exceed best practice standards by following Good Manufacturing Practices, ensuring only consistent and safe products are available in the marketplace. This unique program features full quality audits of policies and facility operations. All aspects of your production operation plus quality and compliance will be examined.

Good Manufacturing Practices (GMP)

Good Manufacturing Practice systems ensure that cannabis operators take proactive steps to guarantee their products are safe and effective and meet a certain level of quality. GMPs cover control of starting materials, premises and equipment, personnel and training, as well as hygiene and sanitation. Adhering to these practices confirms that you are producing the most safe and effective products for consumers, helping you save time and money, and establishing your business as a leader in the expanding cannabis marketplace.

Why Get Certified?

A growing list of states are requiring GMP systems in cannabis regulations. Getting certified with ASTM gives you independent scientific evidence that your products and facilities adhere to the strictest industry standards and meet regulations. Minimize risks, ensure consumer health and safety, and stay ahead of regulatory requirements.

Consumers will be able to use your products with confidence, knowing that your quality systems have been evaluated at the highest level. Display your ASTM certification mark on packaging and materials, showing that your company is committed to GMP. Build trust with consumers and stakeholders, improve your reputation, and increase profitability.

ASTM Cannabis Certification audit includes:

Quality Management System (QMS) document review

Good Manufacturing Practices (GMP) program assessment

Facility assessment

Product and process review

Ready to get certified? Request an application and get started today.

ALSO AVAILABLE

Hemp Flower Proficiency Testing Program

Meet industry regulatory requirements and improve your lab's performance in cannabis testing.

Use our proven statistical quality assurance (SQA) tool to measure your performance in testing cannabis samples for potency, pesticides, moisture content, water activity, and more using ASTM standards. Uncover strengths and weaknesses, satisfy accreditation requirements, and compare your results with other labs.
